FlexITy Solutions Achieves Status as Cisco Network-Hosted Storage Applications Authorized Technology Provider

Richmond Hill, ON – July 10th, 2008 – FlexITy Solutions announced today that it has achieved Network-Hosted Storage Applications Authorized Technology Provider (ATP-NHSA) status from Cisco®. This designation is by invitation only and recognizes FlexITy Solutions for its investment in gaining specific knowledge and expertise in selling, planning, designing, implementing and optimizing storage networking solutions, including network-based applications. To receive this designation, FlexITy Solutions completed the requirements for the Cisco Storage Networking Specialization.

“Our recognition as a Cisco Network-Hosted Storage Applications Authorized Technology Provider reflects our expertise, commitment and dedication to providing unique solutions and services,” said Peter Stavropoulos, CEO of FlexITy. “The ATP-NHSA designation demonstrates FlexITy’s ability to combine advanced Cisco solutions and our Managed Services to deliver high-value solutions to customers.”

“As customers start deploying more network-enabled applications for their data center and storage infrastructures, Cisco Authorized Technology Provider Partners such as FlexITy Solutions are critical for the growth of this market,” said John Growdon, director of data center, routing and switching, worldwide channels for Cisco.

-more-

Through its industry-leading MDS 9000 SAN-OS Software and other series products, Cisco provides an open, standards-based platform to help enable the deployment of high-performance intelligent fabric applications – such as network-based volume management, remote replication, and continuous data protection – from third-party storage software vendors. The Cisco MDS 9000 Intelligent Fabric Applications complement the Cisco Data Center Network Architecture, an integrated set of products, best practices and services that help IT managers build and operate best-in-class network platforms.

The Cisco Authorized Technology Provider (ATP) Program is a key part of Cisco's emerging technology go-to-market strategy. The program helps define the knowledge, skills and services that channel partners need to successfully sell, deploy and support a given technology. As markets mature and technologies progress along the adoption curve, some ATP programs migrate to Cisco Specializations.
